

Technical drawing of a stator assembly, showing a perspective view and a cross-section B-B.

Stator (1:1)

The perspective view shows a long, narrow rectangular component. The total length is dimensioned as 320. The width is dimensioned as B. A small, dark, rectangular feature is visible on the top surface near the left end.

B-B (1:1)

The cross-section B-B shows the internal structure of the component. The total width is dimensioned as 10. The internal structure consists of a series of repeating, hatched rectangular blocks. The first block on the left is dimensioned as 10, and the subsequent blocks are dimensioned as 20. The hatching indicates a specific material or internal structure.

Armature (1:1)

The drawing shows the armature assembly in two views. The top view is a side elevation showing a cylindrical core with a central shaft. The core has a total length of 100 units, with a central section of 84.5 units. The core diameter is 35.6 units. The shaft has a diameter of 24.6 units. The bottom view is a cross-section A-A, showing the internal structure of the core and the shaft. The core is composed of two main parts: a central section with a diameter of 24.6 units and an outer section with a diameter of 35.6 units. The central section has a length of 84.5 units. The outer section has a length of 10 units. The cross-section A-A shows the internal structure of the core, including the central shaft and the surrounding material. The shaft has a diameter of 24.6 units. The core has a total thickness of 10 units. The cross-section A-A also shows the internal structure of the shaft, including the central hole and the surrounding material. The shaft has a total length of 100 units. The cross-section A-A shows the internal structure of the shaft, including the central hole and the surrounding material. The shaft has a total length of 100 units.
